

Designing for Impact IV: **Workshop on Building the National Network for Manufacturing Innovation**

ADVANCED MANUFACTURING NATIONAL PROGRAM OFFICE

Background **About the Advanced Manufacturing National Program Office**

In December 2011, former U.S. Commerce Secretary John Bryson formed the Advanced Manufacturing National Program Office (NPO). Hosted by the National Institute of Standards and Technology (NIST), the office is staffed by representatives from federal agencies with manufacturing-related missions as well as manufacturing companies and universities.

The Advanced Manufacturing NPO is charged with:

- Convening and enabling industry-led, private-public partnerships that focus on manufacturing innovation and engaging U.S. universities, and
- Designing and implementing an integrated “whole of government” advanced manufacturing initiative to facilitate collaboration and information sharing across federal agencies.

By coordinating federal resources and programs, the Advanced Manufacturing NPO will enhance technology transfer in U.S. manufacturing industries and help companies overcome technical obstacles to scaling up production of new technologies.

Mike Molnar, NIST's chief manufacturing officer, directs the office.

The Advanced Manufacturing NPO includes participation from all federal agencies involved in U.S. manufacturing. It will enable more effective collaboration in identifying and addressing challenges and opportunities that span technology areas and cut across agency missions. In addition, the office will link federal efforts to the growing number of private-sector partnerships between manufacturers, universities, state and local governments, and other organizations.

Federal partners include:

- | | |
|-----------------------------------|-------------------------------|
| ◆ Department of Commerce, NIST | ◆ Department of Defense |
| ◆ Department of Education | ◆ Department of Energy |
| ◆ Department of Homeland Security | ◆ Department of Labor |
| ◆ NASA | ◆ National Science Foundation |
| ◆ Small Business Administration | |

A cardiovascular stent, currently manufactured using laser cutting, is a candidate for additive manufacturing.
